INTRODUCTION

Current estimates indicate that one out of every four Americans will develop a malignancy during their lifetime and approximately half will die from their malignancy. Alabama's cancer mortality rate exceeds the rate for the United States. In 2015, the American Cancer Society projected 26,200 new cancer cases would be diagnosed in Alabama. Although cancer takes a heavy toll in Alabama, no statewide data were systematically collected on the number of Alabamians affected by this disease until the implementation of the Alabama Statewide Cancer Registry (ASCR) in 1996. Through the great efforts from the ASCR and registrars statewide in the past twenty years, the data in the ASCR's central repository has consistently reached national standards in completeness, timeliness, and quality.

Cancer registration is an important and fundamental tool in assessing the true extent of cancer in Alabama. The data collected through the statewide cancer registry can be used for epidemiological studies, medical research, and cancer control planning. This central repository of information is a valuable and essential tool in the identification of populations at high risk for cancer, the monitoring of cancer incidence trends, the facilitation of studies related to cancer prevention, the evaluation of cancer control initiatives, and the development of educational awareness programs. In summary, the Alabama Statewide Cancer Registry is a critical program for understanding and controlling cancer in Alabama.

The ASCR is funded through the Centers for Disease Control and Prevention (CDC) National Program of Cancer Registries. CDC has established national standards to ensure the completeness, timeliness and quality of cancer registry data. In addition, CDC recommends that central registries incorporate standards for data quality and format as described by the North American Association of Central Cancer Registries (NAACCR). NAACCR annually reviews member registries' abilities to produce complete, accurate and timely data. Registries that meet the highest standards receive NAACCR certification. This achievement would not be possible without the prompt and accurate reporting from hospitals, healthcare providers and reporting facilities throughout Alabama.

ALABAMA LAW 95-275

The Alabama Statewide Cancer Registry (ASCR), with authorization from legislative Act 95-275, titled the "Alabama Statewide Cancer Registry Act," enacted in July 1995, began collecting required information effective January 1, 1996, on each cancer patient diagnosed or treated at a hospital, clinical laboratory, cancer treatment center, or physician's office within the state of Alabama. Act 95-275 was amended in 2004 to require the reporting of all confirmed cases of cancer and benign brain-related tumors. Each health care facility or provider is required to report cancer cases to the ASCR according to the conditions set forth in the Rules of the State Board of Health (Chapter 420-7-3). The Rules were also amended in 2004 to require the reporting of benign brain tumors. A copy of Act 95-275 and the Rules of the State Board of Health can be found on the ASCR website at www.adph.org/ASCR.

CONFIDENTIALITY

Data obtained under the Alabama Statewide Cancer Registry Act are for the confidential use of the Alabama Department of Public Health and the persons designated by the State Health Officer

to carry out the interests of the Act. The data are privileged and may not be divulged or made public in a manner that discloses the identity of the patient or the reporting facility or physician. Information revealing the caseload of a particular facility or health care professional is also confidential. All reporting entities that comply with the Alabama Statewide Cancer Registry Act in good faith are immune from liability for furnishing the required information to the ASCR.

EFFECTS OF HIPAA

HIPAA does not affect surveillance programs such as the ASCR or hospital-based cancer registries, and does not supersede existing state law. Section 512 part (b) of the HIPAA regulations state:

- (b) Standard: uses and disclosures for public health activities.
 - (1) Permitted disclosures: A covered entity may disclose protected health information for the purpose of preventing or controlling disease, injury, or disability, including, but not limited to, the reporting of disease, injury, vital events such as birth or death, and the conduct of public health surveillance, public health investigations, and public health interventions; or, at the direction of a public health authority, to an official of a foreign government agency that is acting in collaboration with a public health authority." Disclosure is permissible to a public health authority authorized by law to collect or receive such information for the purpose of preventing or controlling disease...including...reporting of disease...and the conduct of public health surveillance...". In other words, HIPAA provided for public health surveillance activities such as cancer registries. As cancer reporting to the ASCR is required by public health law and rules and this requirement is often fulfilled by the hospital-based cancer registry, they are also given access, by law, to all records. All reporting facilities and providers are acting as representatives of the ADPH in collecting and reporting cancer information. And, as a representative, they have full access to the medical records, as is defined in Alabama Act 95-275.

DISCLOSURE OF DATA

The Alabama Statewide Cancer Registry (ASCR) **may** exchange patient-specific information with the reporting facility or clinical facility for the purpose of obtaining information necessary to complete a case record, provided these facilities comply with all ASCR confidentiality policies.

To achieve complete case ascertainment, the ASCR **may** exchange patient-specific information with other state cancer registries if reciprocal data sharing agreements and confidentiality provisions are in place.

The ASCR **may** grant researchers access to confidential information concerning cancer patients, provided the research project has been approved by the Review Board of the Alabama Statewide Cancer Registry Advisory Council, the Internal Review Board of the Alabama Department of Public Health, and where pertinent, the research university's Internal Review Board **and** the researcher has complied with the provisions **and** confidentiality policies mandated by the Alabama Statewide Cancer Registry's requests for confidential data.

REPORTING REQUIREMENTS

All healthcare facilities and/or providers diagnosing or providing treatment to cancer patients shall report complete abstracts on each case of confirmed cancer on a monthly basis, **by the last date of each month**, in the prescribed format within 180 days of admission or diagnosis. (Example: January cases will be submitted on or before July 1st, February cases submitted on or before August 1st, etc.) This method allows the ASCR to receive continuous reporting in a timely manner.

Healthcare facilities with an established cancer registry must report each case of cancer in the NAACCR Record Layout utilizing the software program of their choice.

Facilities without an established cancer registry must report each case of cancer in the NAACCR Record Layout, and must establish a reporting mechanism through direct reporting, partnering with an established cancer registry, or contracting with a Certified Tumor Registrar. All cases are to be reported in the NAACCR Record Layout format utilizing the software program of their choice. The ASCR offers a cancer abstraction software program at no charge.

Healthcare providers (specifically physicians) diagnosing or providing treatment to cancer patients each year must report each confirmed case of cancer not previously reported by a healthcare facility.

REQUIRED DATA ELEMENTS

All machine-readable reports of confirmed cases of cancer submitted to the ASCR shall include but not be limited to the NAACCR data items. Any further demographic, diagnostic, treatment or follow-up information is to be provided upon request by the ASCR concerning any person now or formerly receiving services, diagnosed as having or having had a malignant neoplasm. Additionally, the ASCR shall be permitted access to all records, including death certificates, which would identify confirmed cases of cancer or would establish characteristics of the cancer, treatment of the cancer, or medical status of any identified cancer patient.

REPORTING FORMATS

Cancer cases may be reported using the following formats determined according to your caseload:

1) Internet Data Transfer (Required for use by all reporting facilities.)

The Alabama Statewide Cancer Registry (ASCR) offers Internet data submission designed to allow for more efficient data management and information retrieval. To maintain the strictest confidentiality, the ASCR has implemented a secure data transfer system – Web Plus, using 128-bit encryption, the highest security available. A facility is required to complete a Web Plus Account Request Form in order to receive access permission. A user ID and password will be issued from the ASCR before a facility can log onto the Web Plus.

Each month, your facility will log onto Web Plus via the secure server, to submit data files or retrieve data reports. Access is limited to authorized individuals only: your facility cancer registrar and ASCR staff. Once a file has been transferred, the secure server encrypts the file, completes the transfer, and notifies ASCR staff that a file is present on the secure server. The file remains encrypted while ASCR staff are transferring the file from the secure server to our departmental server for processing. This server is housed in the central office of the Alabama Department of Public Health. This step provides additional security to prohibit unauthorized access to this confidential information.

The ASCR offers all reporting sources two cancer abstraction software options at no charge: Abstract Plus and Web Plus. Both programs support ASCR state reporting requirements only.

1) Abstract Plus (Stand Alone Program for Local Computer)

Abstract Plus is an abstracting tool used to summarize the medical record into an electronic report of cancer diagnosis and treatment by abstractors and other individuals or groups who work with cancer data. Data is maintained on a local hard drive at the reporting facility until exported and submitted to the ASCR monthly.

2) Web Plus (Direct Internet Data Entry)

Web Plus is also used as a Web-based application to collect cancer data securely over the Internet. Data entry through Web Plus is most suited for physicians' offices and other low-volume reporting sources that do not have facility-based cancer registries. Records are saved in a database at the ASCR, and cases entered by one facility or office, are not visible to other facilities. Data entered is validated by the EDITS Engine running on a Web server. Users, display types, and edit configurations are managed by the ASCR. Web Plus is hosted on a secure Web server that has a digital certificate installed; the communication between the client and the server is encrypted with Secure Socket Layer (SSL) technology.

Both software options were developed at the CDC Division of Cancer Prevention and Control in support of CDC's National Program of Cancer Registries (NPCR).

DATA SUBMISSION SCHEDULE

All healthcare facilities and/or providers diagnosing or providing treatment to cancer patients shall report complete abstracts on each case of confirmed cancer on a monthly basis, **before the 10th of the following month**, in the prescribed format and within 180 days of admission or diagnosis. (Example: January cases will be reported by July 10th, February cases reported by August 10th, etc.) This method allows the ASCR to receive continuous reporting in a timely manner.

Data submission schedules are shown in the charts below. Facilities with more than 50 cases a year should follow the schedule chart below.

REPORTING SCHEDULE		
Current (Due) Date	Level of Completeness	Dx Date of Cases (Timeliness)
Jan 2017	58%	Jul 2016
Feb 2017	67%	Aug 2016
Mar 2017	75%	Sep 2016
Apr 2017	83%	Oct 2016
May 2017	92%	Nov 2016
Jun 2017	100%	Dec 2016
Jul 2017	8%	Jan 2017
Aug 2017	17%	Feb 2017
Sep 2017	25%	Mar 2017
Oct 2017	33%	Apr 2017
Nov 2017	42%	May 2017
Dec 2017	50%	Jun 2017

Facilities with less than 50 cases a year and abstract via WebPlus should follow the schedule chart below.

DATE(S) OF DIAGNOSIS	*CASE FINDING INFORMATION DUE	ABSTRACT DUE
Jan, Feb, Mar 2017	April 30, 2017	July 31, 2017
Apr, May, Jun 2017	July 31, 2017	October 31, 2017
July, Aug, Sep 2017	October 31, 2017	January 31, 2018
Oct, Nov, Dec 2017	January 31, 2018	April 30, 2018

* Case finding information should include path reports, disease index, X-rays/Scans, etc.

After the ASCR case finding auditor reviews that information, a list of reportable cases will be sent back to facilities within one month. The reportable cases should be entered in Web Plus before abstract due date.

The reportable case list should be generated by the CF auditor and returned to the hospitals on or before the date due.

List of Reportable Cases SCHEDULE <i>(List to be Returned to Facility)</i>	
DATE(S) OF DIAGNOSIS	DATE DUE
Jan, Feb, Mar 2017	May 31, 2017
Apr, May, Jun 2017	August 31, 2017
July, Aug, Sep 2017	November 30, 2017
Oct, Nov, Dec 2017	February 28, 2018

DATA STANDARDS

The record layout adopted by the Alabama Statewide Cancer Registry (ASCR) was developed by the American College of Surgeons Commission on Cancer (COC) in consultation with physicians, nurses, cancer registrars, administrators, central and national registry organizations, software providers, and is maintained by the Uniform Data Standards Committee of the North American Association of Central Cancer Registries (NAACCR). The collaborative effort of these individuals and groups has encouraged accurate, uniform data collection.

Using the Data Standards Section (FORDS Manual)

The header that precedes each data item contains the following information:

Data Item Name	Appears at the left margin. The names of pre-existing data items may have been changed. The previous name for the item appears in parentheses.
Item Length	The total of the numbers and/or letters contained in a field (code) appears at the right margin.
Data Type	This refers to the nature of the field. Alpha= alphabetic only; alphanumeric = a combination of alphabetic and numeric; numeric = numbers only; alpha character = alphabetical or character, such as / or &; and free text = any alphabetic, numeric, or character value. Data type may also provide additional instructions on the use of upper or lower case, right and left justification, zero-fill requirements, etc.
Item Number	The NAACCR item number is recorded for each field.

Other

Each institution is assigned a unique identification number used to identify reporting and following institutions as well as "Institution referred from" or "Institution referred to." A copy of institution identification numbers for Alabama can be found in Appendix A.

County at Dx is standard codes in FIPS publication "Counties and Equivalent Entities of the United States, Its Possessions, and Associated Areas." This information is important for measuring cancer incidence in a particular geographic area. Alabama Counties and Codes are listed in Appendix B.

Starting 2013, changes are made to capture state and country level information for Dx address, current address, birth place and place of death. The codes are listed in Appendix C.

ALABAMA'S CANCER REPORTING PRINCIPLES

The Alabama Statewide Cancer Registry (ASCR) has adopted the Facility Oncology Registry Data Standards (FORDS) published by the Commission on Cancer, American College of Surgeons, along with additions and exceptions listed in this section. The FORDS document contains detailed specifications on all data items, coding rules, codes, and definitions. To meet ASCR reporting requirements, facilities must comply with the following standards for operation and must maintain their databases using the codes and coding rules as defined in this text.

GENERAL PRINCIPLES

The cancer registry is a system to monitor all types of reportable malignancies diagnosed or treated in Alabama. This central repository of information is a valuable tool in monitoring trends in cancer incidence, identifying populations at high risk for cancer, facilitating studies related to cancer prevention, and planning cancer control initiatives.

The database includes case identification and a description of the patient and the cancer.

Registry responsibilities may also include lifetime clinical follow-up of the cancer patient. Follow-up is necessary to evaluate treatment outcome.

REFERENCE DATE

The reference date is the start date after which all eligible cases must be included in the registry. This date is a reference point for many standards. A program must establish a reference date as of January 1 of a given year. For the purpose of data collection and reporting, the ASCR reference date is January 1, 1996.

REPORTABLE DIAGNOSES

After their reference date, facilities must include all reportable malignancies that meet the following criteria:

- < Patients diagnosed or receiving cancer-directed care in the institution's inpatient or outpatient department or ambulatory care center.¹ Patients diagnosed at a staff physician's office and receiving any part of their first course of treatment at the reporting institution.
- < Patients diagnosed with a behavior code of 2² or higher as defined in the *International Classification of Diseases for Oncology*, Third Edition (ICD-O-3).
- < Patients diagnosed with basal and squamous cell cancers originating in mucoepidermoid sites: lip (C00.0-C00.0); anus (C21.0); vulva (C51.0-C51.9); vagina (C52.9); penis (C60.0-C60.9); scrotum (C63.2).

¹ If the medical record is the property of the reporting institution, the case must be included in the database.

² Certain exceptions apply. See exclusion section.

ASCR-SPECIFIC REQUIREMENTS

The ASCR requires facilities to include reportable malignancies diagnosed and/or initially treated at the reporting institution, and which meets the criteria for analytic (class of case 00 - 22) and non-analytic cases (class of case 32** 34, 36, 38, 40, 41, 42 and 43). Inpatients, outpatients, and clinically diagnosed patients (not histologically confirmed) must be included.

Analytic Cases

00, 10, 11, 12, 13, 14, 20, 21, 22

Non- Analytic Cases

32**, 34, 36, 38, 40, 41, 42, 43,

Class of Case Codes 40 and 41:

These are used by hospitals that abstract cases that were diagnosed and treated only in a staff physician(s) office.
--

Class of Case Code 42:

It is optional for the hospital to abstract cases for a clinic or other facility such as chemotherapy or radiation that is not owned by the hospital. However, the ASCR encourages the hospitals to report those cases.

Class of Case codes not required to be abstracted (the ASCR's exclusion list): 30, 31, 33, 34*, 35, 36*,37 and 99

*** Cases with Class of case code 34 and 36 are reportable to the ASCR, if they are**

- | |
|---|
| <ul style="list-style-type: none">• Vaginal intraepithelial neoplasia, Grade III or (VAIN III) (8077/2)• Vulvar intraepithelial neoplasia, Grade III or (VIN III) (8077/2)• Laryngeal intraepithelial neoplasia, Grade III (LINIII) (8077/2), (C320-C329)• Squamous intraepithelial neoplasia, Grade III (SINIII) (8077/2), except Cervix and Skin |
|---|

**Cases with class of case code 32 should be reportable to the ASCR if the diagnosis date of the tumor is known.

OTHER ALABAMA-SPECIFIC REQUIREMENTS

Text-Usual Occupation	Type of Reporting Source
Text-Usual Industry	NPI Numbers
Managing Physician	Primary Surgeon
Reason for No Surgery	Reason for No Radiation
Reason for No Chemo	Reason for No Hormones
Cause of Death	Place of Death
ICD Revision Number	Follow-Up Contact Phone

<u>Required TEXT</u>	<u>Supplemental TEXT</u>
Diagnostic	Treatment
- PE	- BRM
- Xray/Scan	- Radiation
- Scopes	- Chemo
- Lab Tests	- Hormones
- Operative Reports	- Other
- Path Reports	
- Primary Site	
- Histology	
- Staging	
Treatment	
- Surgery	

ASCR requires the Collaborative Staging data items to derive Summary Stage 2000, SEER EOD staging and AJCC TNM Staging beginning with 2004 cases.

Exclusions:

Facilities are not required to accession, abstract, or conduct follow-up for cases that meet the following criteria:

- < **Patients** seen in consultation only. A consult may be done to confirm a diagnosis or treatment plan. The reporting institution may provide services not available at the diagnosing or treating facility, such as Computerized Tomography (CT) scans, Magnetic Resonance Imaging (MRI) scans, or placement of venous access devices.
- < **Patients** receiving transient care at the reporting institution to prevent interruption of the first course of treatment. The patient may be vacationing or visiting in the area, or equipment failure at the primary treating institution may require the patient to temporarily receive treatment elsewhere.
- < **Patients** with active, previously diagnosed cancer who are admitted to the reporting institution for unrelated medical conditions.

- < **Patients** with precancerous conditions or benign tumors.³
- < **Patients** with carcinoma-in-situ of the cervix (CIS).
- < **Patients** with an intraepithelial neoplasia. Diagnoses include:
Cervical intraepithelial neoplasia
- < **Patients** with skin cancers, (C44.-) who do not meet the conditions specified in the reportable diagnosis list.
- < **Patients** with a history of malignancy who are clinically free of disease.
- < **Patients** admitted for terminal supportive care, including home care service.
- < **Patients** admitted to a designated hospice.
- < **Patients** who are diagnosed at a staff physician's office and treated in another facility.

³ These cases may be reportable -by-agreement.

Table 1

Registry Functions by Type of Case*

	Accession	Index	Abstract	Follow ⁴
Analytic (class of case 00 - 22)	X	X	X	X
Non-analytic (class of case 32, 34, 36, 38, 40, 41, 42 and 43)	X	X	X	
Carcinoma-in-situ of the cervix (CIS)				
Basal or squamous cell carcinoma of a mucoepidermoid site	X	X	X	X
Foreign residents	X	X	X	X

- X identifies required functions

⁴Follow-up is not required if the patient resides in a foreign country at the time of diagnosis or follow-up.

REPORTABLE LIST

The reportable list identifies all diagnoses and type of cases that must be included in the registry database. See Appendix D for ASCR reportable list.

CANCER REGISTRY RULES FOR OPERATION

CASEFINDING

Casefinding is a systematic method of locating all eligible cases. The method of casefinding must include all points of service from which a patient may enter the health care delivery system for diagnosis or therapeutic services for the management of cancer. Casefinding will identify both new cases and cases already entered into the registry. Readmissions may be a source of follow-up information.

Multiple sources must be used to identify the eligible cases. Casefinding sources include:

- Health Information Management Department (HIM). This department maintains the medical records and a disease index that identifies the patient, date of service, and the diagnosis.
- Pathology and Cytology Departments. The histology, cytology, bone marrow, and autopsy reports are source documents for identifying eligible cases.
- Oncology-related services. Radiation and medical oncology treatment areas are sources of casefinding.

SUSPENSE SYSTEM

Reporting sources should maintain a suspense system which identifies cases that have not been completely abstracted. The cases should be sorted and listed by date of diagnosis. Cases should be processed in chronological order for ensuring timely state reporting. Periodically, administrative reports should be produced to assess timeliness of the abstracting process. The abstracting currency must be six months or less from date of diagnosis. If a registry serves multiple institutions, the register must include an institution identifier.

A suspense list should contain the patient's name, patient identifier, date of diagnosis, and primary site.

ACCESSION REGISTER

An accession register is an annual, sequential listing of all reportable cancer included in a cancer registry. It may be presented either on-screen or in hard-copy and must be readily accessible. The register must include the accession and sequence numbers, patient name, primary site, and date of initial diagnosis. If a registry serves multiple institutions, the register must include an institution identifier. The accession register is used to audit other registry files, monitor casefinding, assess the workload, and verify patient identification. Detailed information on the assignment of accession and sequence numbers can be found in Section Two of the F.O.R.D.S Manual.

PATIENT INDEX

The patient index is an alphabetical list of each patient entered into the registry since the reference date. The list must contain the patient's name, sex, date of birth, primary site(s), laterality, histology(ies), date(s) of diagnosis, accession number, sequence number(s), medical record number, and date of death.

For patients with multiple primaries, the patient index must include the primary site, laterality, histologic type, date of diagnosis, and sequence number of each primary.

ABSTRACT

An abstract must be completed for all analytic cases that meet the criteria for inclusion in the registry. The abstract is a summary of pertinent information about the patient, the cancer, the treatment, and the outcome. Components include patient identification, cancer identification, stage of disease at initial diagnosis, first course of treatment, recurrence, treatment for recurrence or progression of disease, and follow-up. The abstract must contain the items in the NAACCR record layout. Patient gender, race, sex, primary site, histology, laterality of disease, first course of treatment, and patient status at last contact must be also recorded in natural language in corresponding text fields. (*Not coded*) See Appendix D for complete data item requirement by ASCR.

If a patient has multiple primary malignancies, an abstract must be prepared for each reportable primary diagnosed or treated at the reporting institution after the reference date. Abstracting must be completed within six months from date of initial diagnosis.

QUALITY CONTROL

One of the most important elements in the establishment and maintenance of a cancer registry is the quality of the data collected. To be most effective, quality control should deal with every aspect of production, from acquisition of raw material to distribution of the final product. The term "quality-control program" refers to the implementation and routine use of various quality-control methods in an organized, planned manner and implies a comprehensive approach to the maintenance of quality.

The ASCR will edit standard data fields using the appropriate national edit standards for that field. This allows, at the earliest stages of data collection, the identification of errors, opportunities for improvement, and identification of topics for continuing education.

On-site casefinding and/or re-abstraction audits of all reporting sources will be performed by the ASCR at least once every five years. The data fields to be evaluated will be determined at the time of the audits. Outcomes will reveal evidence of completeness of casefinding, timeliness, and accuracy. Results of these audits with analysis of discrepancies and recommendations for improvement will be described in a report to be distributed to study participants.

FOLLOW-UP

Systematic annual follow-up of patients is an important cancer registry function. Follow-up is based on the date of last contact and is delinquent (lost) if no contact has been made within 15 months after the date of last follow-up-information. Cases that are lost (delinquent) should remain in the follow-up process until information is obtained. In order to monitor the success of the follow-up activity, it is useful to calculate a percentage of people who have been successfully followed. The observed follow-up rate is calculated using follow-up data on all patients, alive or dead, while the relative follow-up rate considers the differences in the risk of dying from causes other than the disease under study. Every effort should be made to have no losses to follow-up, however, losses are expected. Non-analytic cases, foreign residents, benign or borderline malignancies, carcinoma in situ of the cervix, and localized basal and squamous skin cancers are not included in follow-up calculations. Patients who are delinquent or lost to follow-up and whose age exceeds 100 years may be excluded from follow-up calculations. Follow-up data must include the date(s) and type(s) of treatment for cancer, the site(s) of distant metastasis, the site and histology(ies) of any subsequent primary(ies), the date of last contact, and the status of the patient and the cancer.

To obtain appropriate follow-up data, the registrar must make use of all available resources. Key resources include: telephone directories, physician (institution, local and national) directories, and listing of institutions, nursing homes, home-care agencies, and county health departments.

Recommended follow-up procedures are as follows:

- < Determine frequency of contact; annual is standard
- < Produce list of patients due for follow-up
- < Check in-house sources
- < Inpatient admissions
- < Outpatient surgery, chemotherapy, radiation therapy
- < Clinic or other type of outpatient department visit
- < Emergency department
- < Social services
- < Business office
- < Contact the physician
- < Determine hierarchy; e.g., managing physician, medical oncologist, radiation oncologist, surgeon, internist, other non-cancer specialist
- < Approved follow-up letter recommended
- < Telephone contact, especially with non-responders
- < Contact the patient
- < Approved follow-up letter recommended
- < Telephone
- < Contact a third party
- < Approved follow-up letter recommended
- < Relatives
- < Friends
- < Others
- < Contact other sources
- < Other institutions
- < Central registries (ASCR, other states)
- < Obituaries

- < National death index
- < Visiting nurses associations
- < Home health agencies

When contacting patients or a third party for follow-up data, the contact must be initiated in a sensitive but professional manner. Most registries make this contact through the use of form letters, but direct contact by telephone may be necessary. It is important to keep in mind, at all times, the sensitive nature of the work being performed. Follow-up should always operate within hospital policy since this work is conducted with the hospital's "public," and in actual fact serves as a public relations service for the hospital. If direct patient contact by telephone is used, be prepared with appropriate information and referral information, practice a prepared outline or script, select a good time to place the call, and remove distractions. Be sure to ask only for the needed information; "How are you since your hospital stay in...?," "Who are your present physicians?" Answer questions honestly and promptly and, if the patient or third party asks a question out of your expertise, be sure to refer them to the appropriate person.

If the patient becomes "lost to follow-up," and date of last contact is greater than 15 months, every effort should be made to locate the patient. Many times, a personal call to the physician's office, or a second letter, may elicit a very useful piece of information. Even if no other information is available, the call can alert the staff as to the need for additional follow-up information.

- Be organized; be able to produce an accurate list of patients due for follow-up
- Be consistent; develop routines. This is especially important for physician's offices that receive a large volume of follow-up requests.
- Be courteous; telephone manners are especially important when speaking with physician's offices, patients or other registries
- Be cooperative; helping someone else will bring rewards later
- Be inventive; try new ways of reaching your objective
- Be flexible; if someone seems unwilling to help, ask if you can call back at a more convenient time
- Give feedback; share your follow-up information with physicians, medical records, radiation therapy, administration, public relations, and other appropriate sources.

CONFIDENTIALITY AND RELEASE OF INFORMATION

The release of information involves accommodating general, case, and patient-specific data requests. Release of information must be closely supervised. Information may be requested by staff physicians, other cancer registries, or by national organizations. Some of the requests will be for general information that does not include patient identification. The facility may authorize the release of general information to specific groups. The registry staff could routinely respond to these requests for information and document releases in a request log: the request date, requestor's name or organization, information requested, intended use of the data, and the date the information was sent to the requestor should be included. Other requests may be for confidential information that would specifically identify the patient, the physician, or another individual. The registrar must comply with the hospital or reporting facility's established guidelines and procedures for release of confidential information. All requests must be processed according to those procedures and recorded in the request log. Each facility should coordinate with appropriate committees to develop and document policies and procedures that address the following:

- < Data release criteria
- < Patient rights
- < Informed consent
- < Authorization

REPORTING

Analysis and use of registry data are important end products of data collection. The ASCR encourages frequent use of the data and will provide facilities with appropriate reports for comparison with regional and national data. A critique of the data may identify trends and serve as the basis for quality management and planning.

RETENTION OF DOCUMENTS

Indefinite retention of registry data and files is required.

PROCEDURE MANUAL

The ASCR recommends that facilities maintain a complete, up-to-date procedure manual that documents each phase of its cancer reporting operations. A procedure manual is a valuable and necessary tool used to organize and maintain an effective, efficient program. A complete procedure manual details the overall structure of the reporting requirements and the day-to-day operations of the registry. When adhered to, this manual will ensure a smooth operation with consistent and accurate abstracting, systematic and continuous follow-up, and good reporting. The manual is also

invaluable for training new registry personnel. The procedure manual should contain the following: job descriptions and specifications of registry positions; case eligibility criteria; the reportable list; procedures for casefinding; maintaining and using the suspense file, and accessioning cases into the registry; a description of the registry filing systems; documentation of data collection methods, including principles of abstracting, detailed definitions for each data item, references used for coding systems, if applicable, and staging systems used in the registry; follow-up procedures, including institution and registry policies for contacting patients and samples of approved follow-up letters; documentation of quality control procedures; a description of reporting mechanisms; description of quality management and improvement system; policy statements about confidentiality and the release of information; and documentation of the date(s) of implementation or changes in policies or registry operations.

APPENDIX A: ALABAMA REPORTING SOURCES

Hospitals (95)

Organization Name	City	FIN
Andalusia Regional Hospital	Andalusia	6530050

APPENDIX D: ASCR REPORTABLE LIST (2017)

Casefinding Codes for ICD-O-3 Reportable Diseases

The following lists are intended to assist in identifying reportable neoplasms found through casefinding sources that use ICD-10-CM codes to classify the diagnoses. These codes are to be effective with newly diagnosed cases beginning with January 1, 2017.

ICD-10-CM Code	Explanation of Code
C00.- C43.-, C4A.-, C45.- C96.-	Malignant neoplasms (excluding category C44), stated or presumed to be primary (of specified site) and certain specified histologies
D00.- D09.-	In-situ neoplasms <i>Note: Carcinoma in situ of the cervix (CIN111-8077/2) and Prostatic Intraepithelial Carcinoma (PIN111-8148/2) are not reportable</i>
D18.1	Lymphangioma, any site <i>Note: Includes Lymphangiomas of Brain, Other parts of nervous system and endocrine glands, which are reportable</i>
D18.02	Hemangioma of intracranial structures and any site
D32.-	Benign neoplasm of meninges (cerebral, spinal and unspecified)
D33.-	Benign neoplasm of brain and other parts of central nervous system (includes Olfactory, Optic, Acoustic and Cranial Nerves)
D35.2- D35.4	Benign neoplasm of pituitary gland, craniopharyngeal duct and pineal gland
D37._ - D41._	Neoplasms of uncertain or unknown behavior (see "must collect" list for reportable neoplasms of uncertain or unknown behavior) <i>Note: Screen for incorrectly coded malignancies or reportable by agreement</i>
D42.-, D43.-	Neoplasm of uncertain or unknown behavior of meninges, brain, CNS
D44.3 - D44.5	Neoplasm of uncertain or unknown behavior of pituitary gland, craniopharyngeal duct and pineal gland
D45	Polycythemia vera (9950/3)
D46.-	Myelodysplastic syndromes (9980, 9982, 9983, 9985, 9986, 9989, 9991, 9992)
D47.0	Histiocytic and mast cell tumors of uncertain behavior <i>ICD-10-CM Coding instruction note: Excludes: malignant mast cell tumor (C96.2), mastocytosis (congenital)(cutaneous) (0852.2)</i>
D47.1	Chronic myeloproliferative disease (9963/3, 9975/3) <i>ICD-10-CM Coding instruction note: Excludes the following:</i> <i>Atypical chronic myeloid leukemia BCR/ABL-negative (C92.2_)</i> <i>Chronic myeloid leukemia BCR/ABL-positive (C92.1_)</i> <i>Myelofibrosis & Secondary myelofibrosis {D75.81}</i> <i>Myelophthisic anemia & Myelophthisis {D61.82}</i>
D47.3	Essential (hemorrhagic) thrombocythemia (9962/3) <i>Includes: Essential thrombocytosis, idiopathic hemorrhagic thrombocythemia</i>
D47.4	Osteomyelofibrosis (9961/3) <i>Includes: Chronic idiopathic myelofibrosis Myelofibrosis (idiopathic) (with myeloid metaplasia) Myelosclerosis (megakaryocytic) with myeloid metaplasia Secondary myelofibrosis in myeloproliferative disease</i>
D47.Z-	Neoplasm of uncertain behavior of lymphoid, hematopoietic and related tissue, unspecified (9960/3, 9970/1, 9971/3, 9931/3)

D47.9	Neoplasm of uncertain behavior of lymphoid, hematopoietic and related tissue, unspecified (9970/1, 9931/3)
D49.6, D49.7	Neoplasm of unspecified behavior of brain, endocrine glands and other CNS
D63.0	Anemia in neoplastic disease
D64.81.23.23.23	Anemia due to antineoplastic chemotherapy
D72.1.23	Hypereosinophilic syndrome (9964/3)*
D76.1 – D76.3	Hemophagocytic syndromes. <i>Reportable inclusion terms: Histiocytic syndromes</i> (9751/3) Note: Hemophagocytic lymphohistiocytosis (also known as hemophagocytic syndrome) can be caused by or associated with a number of conditions, one of which is EBV+ T- cell lymphoproliferative disease of childhood (9724/3)
D81.6, D81.7, D81.89, D81.9, D84.9	Immunodeficiency, unspecified <i>Note: Associated with lymphoproliferative disorders</i>
D89.1	Gamma heavy chain disease; Franklin's disease
J91.0	Malignant pleural effusion <i>Note : Code first malignant neoplasm, if known</i>
R18.0	Malignant ascites <i>Note: Code first malignancy</i>
R85.614	Cytologic evidence of malignancy on smear of anus
R87.614	Cytologic evidence of malignancy on smear of cervix
R87.624	Cytologic evidence of malignancy on smear of vagina
Z03.89	Observation for suspected malignant neoplasm
Z12.31	Encounter for screening mammogram for malignant neoplasm of breast
Z51.0	Admission for radiotherapy
Z51.11	Encounter for antineoplastic chemotherapy
Z51.12	Encounter for antineoplastic immunotherapy
Supplemental Codes	
B20	Human immunodeficiency virus [HIV] disease with other diseases
B97.33, B97.34,	Papillomavirus as the cause of diseases classified elsewhere
B97.35, B97.7	Human T-cell lymphotropic virus, (type I [HTLV-1], type II [HTLV-11], type 2 [HIV 2]) as the cause of diseases classified elsewhere
Q85._	Neurofibromatosis (nonmalignant) (9540/1) <i>Note: Neurofibromatosis is not cancer. These tumors can be precursors to acoustic neuromas, which are reportable</i>

Please note:

- The central registry does **NOT** collect PIN III, CIN III, and CIS of the cervix.
- Borderline cystadenomas M-8442, 8451, 8462, 8472, 8473, of the ovaries which move from /3 to /1 will **NOT** be collected as of 1/1/2001, but cases diagnosed before 1/1/2001 will continue to be submitted to the central registry.
- Basal and Squamous cell carcinoma of the skin are not reportable but tumors that originate in the mucous membrane are reportable and include the following:

Lip	C00.0 – C00.9
Anus	C21.0
Labia	C51.0 – C51.1
Clitoris	C51.2
Vulva	C51.9
Vagina	C52.9
Prepuce	C60.0
Penis	C60.1 – C60.9
Scrotum	C63.2

- All melanomas are reportable.
- As of 1/1/2003 cases of in situ, localized, regional, or distant neoplasm of the skin (ICD-O Topography codes C44.0 – C44.9) with the following ICD-O Morphology codes are **NOT** reportable to ASCR.

M 8000 – 8004 Neoplasms, NOS
M 8010 – 8045 Epithelial neoplasms
M 8050 – 8082 Squamous cell neoplasms of the skin
M 8090 – 8110 Basal cell neoplasms of the skin

- The following terms are synonymous with in situ disease (Behavior code 2)
 - Adenocarcinoma in an adenomatous polyp with no invasion of stalk
 - Bowen's disease
 - Cervical intraepithelial neoplasia or CIN III (**not reportable**)
 - Clark's level I melanoma or limited to epithelium
 - Non-infiltrating comedocarcinoma, confined to epithelium
 - Hutchison's melanotic freckle NOS, intracystic non-infiltrating, intraductal, intraepithelium NOS, intraepidermal NOS (involvement up to but no including basement membrane.)
 - Lentigo maligna, lobular neoplasia, lobular non-infiltrating, noninvasive, no stromal involvement, Papillary non-infiltrating or intraductal
 - Precancerous melanosis
 - Prostatic intraepithelial neoplasia Grade III or PIN III (**not reportable**)
 - Queyrat's ethroplasia, stage 0
 - Vaginal intraepithelial neoplasia Grade III or VAIN III
 - Vulvar intraepithelial neoplasia Grade III or VIN III
 - **Laryngeal intraepithelial neoplasia, grade III (LINIII) (8077/2), C320-C329 is REPORTABLE.**
 - **Squamous intraepithelial neoplasia, grade III (SINIII) (8077/2), except Cervix and Skin, is REPORTABLE.**
- If any invasion is present, no matter how limited – these cases must be coded to invasive behavior

Example: carcinoma in situ 8010/2 of vagina with microinvasion would be coded as invasive carcinoma 8010/3

- All cancer cases should be reported regardless of the patient's state of residency at the time of diagnosis. Cases from other states will be reported to that state but not included in Alabama statistics.
- All in situ cancer cases of the vagina, vulva, and anus are reportable to ASCR. VAIN III, VIN III, AIN III with morphology code of 8077/2
- One other NEW code of note with the October 1, 2007 revisions (but not necessarily for casefinding) is 789.51 (R18.0) malignant ascites...however; the primary site malignancy should be coded first rather than symptoms such as malignant ascites.
- 511.81(J91.0) - Malignant Pleural Effusion
- Carcinod tumor, NOS, of the appendix is now reportable and should be coded to 8240/3.
- Urine cytology positive for malignancy is reportable for diagnoses in 2013 and forward
 - Code the primary site to 689 in the absence of any other information
 - Exception: When a subsequent biopsy of a urinary site is negative, do not report
 - Do not implement new/additional casefindings methods to capture these cases
 - Do not report cytology cases with ambiguous terminology
- Recode the following conditions as shown.
 - Recode all cases of enteroglucagonoma, NOS, as 8152/1. *Enteroglucagonoma is now a related term for glucagonoma.*
 - Then delete code 8157/1 Enteroglucagonoma, NOS
 - Recode all cases of enteroglucagonoma, malignant as 8152/3. *Enteroglucagonoma, malignant is now a related term for glucagonoma, malignant.*
 - Then delete code 8157/3 Enteroglucagonoma, malignant

NOTE: It is important to understand that cancer registry reportability rules based on behavior code still apply. With the exception of primary intracranial and central nervous system benign and borderline tumors, the addition of a /0 or /1 coded term to ICD-O-3 does not imply that it is now reportable.

Changes for ICD O-3 for 2016 Diagnosed Cases

ICD-O-3 IMPLEMENTATION AND REPORTABILITY

In 2014 and 2015 SEER added new reportable histology terms to their Program and Coding Manual. These terms had not been included in any ICD-O-3 errata or implementation guide and therefore were not addressed throughout the cancer surveillance community. **CDC has reviewed the terms (reportable according to SEER) and made the following decisions:**

1. Non-invasive mucinous cystic neoplasm of the pancreas with high-grade dysplasia replaces mucinous cystadenocarcinoma, non-invasive (8470/2) and is **REPORTABLE**.
2. Solid pseudopapillary neoplasm of pancreas (8452/3) is synonymous with solid pseudopapillary carcinoma (C25.) and is **REPORTABLE**.
3. Based on expert pathologist consultation, metastases have been reported in some cystic pancreatic endocrine neoplasm (CPEN) cases. With all other pancreatic endocrine tumors now considered malignant, CPEN will also be considered malignant, until proven otherwise. **Most CPEN cases are non-functioning and are REPORTABLE** using histology code 8150/3, unless the tumor is specified as a neuroendocrine tumor, grade 1 (assign code 8240/3) or neuroendocrine tumor, grade 2 (assign code 8249/3)
4. Laryngeal intraepithelial neoplasia, grade III (LINIII) (8077/2), C320-C329) is **REPORTABLE**.
5. Squamous intraepithelial neoplasia, grade III (SINIII) (8077/2), except Cervix and Skin, is **REPORTABLE**.

6. Mature teratoma of the testes in adults is malignant and REPORTABLE as 9080/3, but continues to be non-reportable in prepubescent children (9080/0). The following provides additional guidance:
 - Adult is defined as post puberty
 - Pubescence can take place over a number of years
 - Do not rely solely on age to indicate pre or post puberty status. Review all information (physical history, etc.) for documentation of pubertal status. When testicular teratomas occur in adult males, pubescent status is likely to be stated in the medical record because it is an important factor of the diagnosis.
 - Do not report if unknown whether patient is pre or post pubescence. When testicular teratoma occurs in a male and there is no mention of pubescence, it is likely that the patient is a child, or pre-pubescent, and the tumor is benign.

While there has not been an official errata to address these histology terms, CDC recommends adding them to your ICD-O-3 Manuals.

APPENDIX E: ASCR REQUIRED DATA ELEMENTS (Version 16)

Below are the ASCR Data Items for v160. The Color Coding System is colored backgrounds for items in the table. The coloring of the items are indicated in the key at the start of the table. An expanded key is located at the end of the two tables explaining the NPCR recommendation for data collection.

ASCR Retired Data Items or AL Specific Items Codes and Retention Information			
Item Number	Name	Position Item Number	Length
9020	Follow-up Contact--Phone	Column 2343-2352	8

Code	Fam Hist of CA	Tobacco History	Alcohol History
0	No	Never Used	No history of alcohol use
1	Yes	Cigarette smoker, current	Current use of alcohol
2		Cigar/pipe smoker, current	Past history of alcohol use, does not currently use
3		Snuff /Chew/smokeless, current	
4		Combination use, current	
5		Previous Use	
9	Unknown	Unknown	Unknown

NPCR Collection Key

R = Required , RH = Historically collected and currently transmitted, RS = Required, site specific, S = Supplementary/recommended

R# = Required; central registries may code available data using either SEER or CoC data items and associated rules

R#* = Required, when available; central registries may code available data using either SEER or CoC data items and associated rules

R* = Required, when available

R^ = Required, these text requirements may be met with one or several text block fields

RH* = Historically collected and currently transmitted when available

RN = Collect according to NPCR stage transition schedule

RS# = Required, site specific; central registries may code available data using either SEER or CoC data items and associated rules

RS* = Required, site specific; when available

FupUnusual - Unusual F-up Methods - use to indicate whether patients want the medical record to be released for other purpose

00 - OK to release

01 – Not release – Out of State

02 - Do not release (HIPPA) (Example: For use when a patient request that their medical record information not be released.)

03 – Do not release (Interstate Data Exchange Cases + HIPAA)

04 - Do not release (VA)

05 - Do not release (Interstate Data Exchange Cases + VA)

06 - Do not release (VA + HIPAA)

07 - Do not release (Interstate Data Exchange Cases + HIPAA+VA)
