

The equipment list shows the required equipment for each level of provider service in Alabama. The quantity listed is the minimum requirement for each licensed ambulance. If there is an “X” in the Adult, Pediatric, and/or Infant fields, then that item is required in each of the sizes (i.e. each ambulance is required to have an adult stethoscope and a pediatric stethoscope or a combination stethoscope with dual bells for adult and pediatric patients so there is an “X” in the adult and pediatric columns).
