

Alabama State Plan for Tobacco Use Prevention and Control

2010-2015

STATE OF ALABAMA DEPARTMENT OF
PUBLIC HEALTH

Donald E. Williamson, MD

State Health Officer

November 30, 2010

Dear Alabama Citizen:

Tobacco use is the single most preventable cause of death and disease in the United States. Smoking kills more people than alcohol, AIDS, car accidents, illegal drugs, murders, and suicides combined, with thousands more dying from smokeless (spit) tobacco use. In Alabama, more than one in five adults smoke. This translates into 7,500 Alabamians dying every year from tobacco-related illnesses, resulting in \$1.49 billion in healthcare costs and \$2.24 billion in lost productivity in our workplaces. Consider that 174,000 children and youth under the age of 18 in our state will die prematurely from smoking. Each year in Alabama, 9,300 children and youth under the age of 18 become daily smokers.

According to the Surgeon General's Report in 2006, there is no safe level of exposure to secondhand smoke. This year, 850 nonsmokers in Alabama will die from exposure to secondhand smoke. We cannot afford to let tobacco continue to addict our youth, damage the health of our citizens, and harm those who breathe secondhand smoke.

Now is the time to act! Stronger policies and laws are needed to protect citizens from secondhand smoke. An increase in tobacco excise tax will keep youth from starting and help tobacco users quit.

I urge decision makers to consider these choices when planning for the state's future. I commend the Alabama Tobacco Use Prevention and Control State Task Force for its efforts in providing us with a comprehensive plan to protect our citizens from the harmful effects of tobacco use.

Sincerely,

A handwritten signature in blue ink, appearing to read "D. Williamson", with a long horizontal flourish extending to the right.

Donald E. Williamson, M.D.
State Health Officer

July 2, 2010

Dear Alabama Citizen:

The facts are alarming. Alabama is one of 18 states in the nation that does not protect people from secondhand smoke. We have the fifth highest smoking rate in the nation, with more than one in five Alabamians using tobacco.

Tobacco use doesn't just harm the user. Secondhand smoke increases the risk of health problems in everyone, especially the young and elderly. Alabamians deserve the right to breathe smokefree air.

To address these issues, nearly 100 citizens from around the state developed the [Alabama Comprehensive Tobacco Use Prevention and Control Plan for 2010-2015](#).

We know what works in reducing tobacco use. It is up to us to incorporate these proven strategies to adopt smokefree policies, increase tobacco taxes, keep youth from starting tobacco use, educate the public about the dangers of tobacco through media campaigns, and help tobacco users to quit.

This report is a call to action for all of us. I encourage you to become involved in reducing the burden of tobacco.

Contact the Coalition for a Tobacco Free Alabama at info@tobaccofreealabama.net or visit our Web site at www.tobaccofreealabama.net and learn how you can make a difference. By addressing the enormous toll tobacco is taking on Alabamians, we can make our state a healthier place to work and play.

Marc T. Riker

Marc T. Riker, Chair
Coalition for a Tobacco Free Alabama

Tobacco-Free Society - It's About Health. It's About Time!

www.tobaccofreealabama.net

VISION:

A TOBACCO-FREE ALABAMA
FOR ALL CITIZENS.

MISSION:

To eliminate unwanted exposure, sickness, and death and reduce the economic burden caused by tobacco use in Alabama.

GOALS:

Cessation:

To reduce tobacco use, tobacco control efforts will increase smokers' readiness and desire to quit by providing cessation information and resources, and an environment supportive of quitting tobacco use.

Prevention:

To reduce tobacco use, tobacco prevention efforts must increase school-based interventions in combination with mass media campaigns and the use of policy change to create support for education and intervention efforts.

Protection from Secondhand Smoke:

To ensure 100% smoke-free, healthy environments for every Alabamian who deserves a smoke-free workplace, school, and home.

Sustainability:

Enable Tobacco Control Programs in the state to remain sustainable.

Executive Summary for State Plan

The Alabama Tobacco Use Prevention and Control Task Force convened in March 2010 to update the State Plan developed in 2000. Although the State has made strides in reducing the burden of tobacco, tobacco use remains the leading cause of preventable death in Alabama. According to the Alabama Youth Tobacco Survey the youth prevalence rate for 9th-12th grades declined from 37.6 percent in 2000 to 18.6 percent in 2010. Since 2000, 87 municipalities have implemented smoke-free ordinances to protect people from secondhand smoke, the third leading cause of preventable death in the nation. Since its inception in 2005, 60,000 tobacco users have called the Alabama Tobacco Quitline. In 2004, the excise tax on tobacco products was increased for the first time in 20 years, helping keep youth from starting to use tobacco and encouraging those who use tobacco to quit while providing much needed revenue for the state.

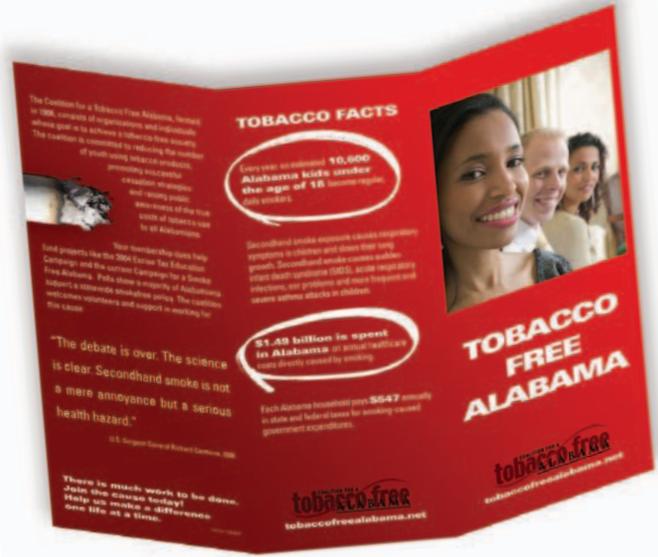

Despite these gains, the state has fallen further behind other states in its struggle against the death and disease caused by tobacco use and exposure over the past 10 years. In 2009, Alabama had the fifth highest rate of adult smokers in America. Alabama is 47th in the nation in terms of per capita funding to reduce tobacco use and exposure. The annual number of deaths from tobacco use grew from 7,000 people in 2000 to 7,600 in 2010. From 2000 to 2010, annual healthcare costs to treat smoking-related diseases in Alabama increased from \$800 million to \$1.49 billion.

This plan was developed to stem the tide of human and economic devastation caused by tobacco use in Alabama. Using new research and evidence-based practices from the *Community Guide for Preventive Services*, the *CDC's Best Practices for Comprehensive Tobacco Control Programs – 2007*, and the *Institute of Medicine's Ending the Tobacco Problem: A Blueprint for the Nation*, the Task Force formed seven workgroups to write the plan. The results of their efforts are found on the following pages. By identifying attainable goals and objectives in each area, the plan offers opportunities for local coalitions, decision makers, and other concerned citizens to take action. Inherent in each portion of the plan is the development and implementation of evaluation systems to track activities and provide accountability.

Timeline of Tobacco Control in Alabama

- 1986** Coalition for Tobacco-Free Alabama established.
- 1993** Alabama Department of Public Health created tobacco prevention and control program with grant from CDC.
- 1995** State Administrative Code required all schools to adopt a policy prohibiting the use of tobacco products on school grounds.
- 1997** State Law passed, further limiting the sale of tobacco to minors under the age of 19.
- 2002** State funding from Master Settlement Agreement provided community grants for tobacco prevention.
- 2003** State Law passed restricting tobacco use in public places.
- 2004** State Excise Tax on cigarettes increased from 16.5 to 42.5 cents per pack.
- 2005** The Alabama Tobacco Quitline launched to provide free treatment to tobacco users.
- 2006** *The Health Consequences of Involuntary Exposure to Tobacco Smoke: A Report of the Surgeon General* - characterizes the health risks caused by exposure to secondhand smoke.
- 2009** State Law passed restricting vending machines to adult venues and tobacco product placement to behind the counter.
- 2009** State Law passed requiring cigarettes sold in Alabama be fire-safe.
- 2009** Federal tax on cigarettes increased from 39 cents to \$1.01 per pack.
- 2010** Cessation program expanded outreach with online services.
- 2010** Medicaid began providing a treatment benefit to pregnant tobacco users.
- 2010** Food and Drug Administration increased access and advertising restrictions on tobacco.
- 2011** Medicare expanded coverage of tobacco cessation counseling.

TOBACCO KILLS MORE ALABAMIANS

- than alcohol,
 - auto accidents,
 - AIDS,
 - suicides,
 - murders,
 - and illegal drugs
- COMBINED.

SMOKING CAUSES

- 87 percent of lung cancer cases,
- 90 percent of deaths from chronic obstructive pulmonary disease (COPD),
- 21 percent of deaths from heart disease,
- 18 percent of deaths from strokes.

SPIT (SMOKELESS) TOBACCO CONTAINS

- 28 cancer-causing agents (carcinogens).

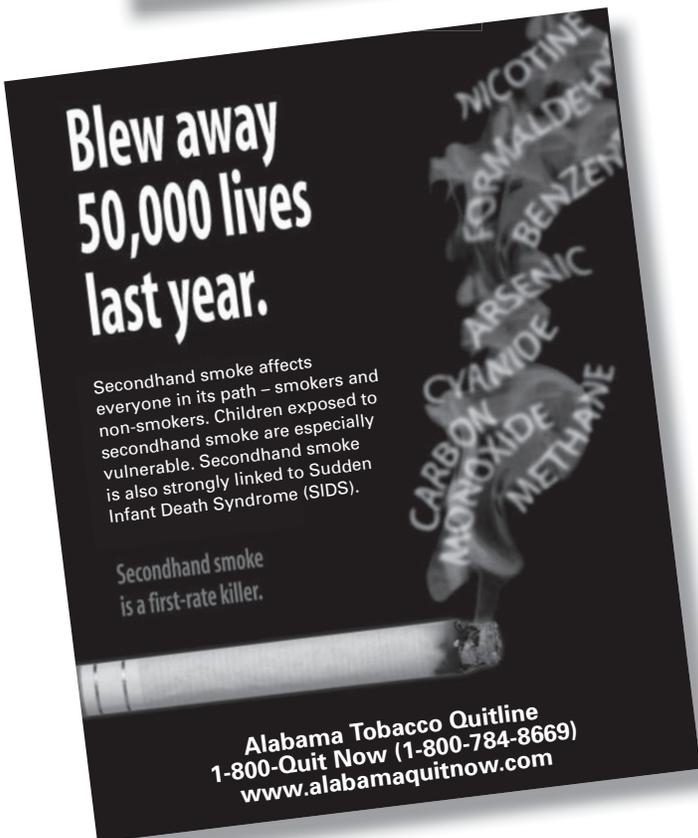

SMOKING DURING PREGNANCY CAUSES

- low birthweight babies,
- miscarriages,
- premature birth,
- and stillbirth.

EXPOSURE TO SECONDHAND SMOKE CAUSES

- heart disease,
- cancers,
- sudden infant death syndrome (SIDS),
- asthma attacks,
- bronchitis,
- and pneumonia.

Health and Economic Toll of Tobacco in Alabama

The Health Toll of Tobacco	IN ALABAMA	IN THE UNITED STATES
Number of people who die each year as a result of their own smoking	7,500	400,000
Number of youth who are under the age of 18 who will die prematurely from smoking (at current smoking rates)	174,000	6 million+
Number of nonsmokers who die every year from the exposure to secondhand smoke	850	Approximately 50,000

SOURCE: Campaign for Tobacco Free Kids

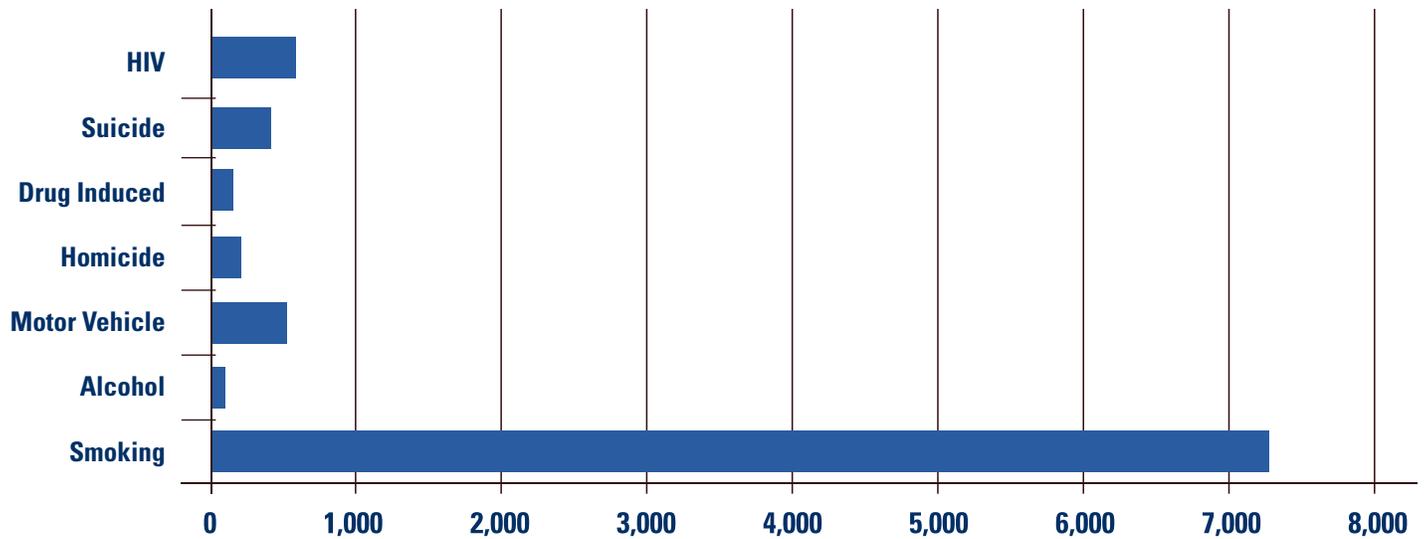

The Economic Toll of Tobacco	IN ALABAMA	IN THE UNITED STATES
Annual healthcare costs directly caused by smoking	\$1.49 billion	\$96 billion
Portion of healthcare costs covered by Medicare	\$238 million	\$58.3 billion
Productivity losses attributed to smoking each year	\$2.24 billion	\$97 billion

SOURCE: Campaign for Tobacco Free Kids

Spending	IN ALABAMA	IN THE UNITED STATES
Estimated annual amount spent by the tobacco industry on marketing	\$261 million	\$12.8 billion
Amount spent on advertising each year by the tobacco industry per capita	\$56	\$42
Current amount spent annually on tobacco prevention programs	\$2.1 million (3.7% of CDC recommendation)	\$629.5 million (17% of CDC recommendation)
Amount spent on tobacco prevention programs by the state each year per capita	\$0.45	\$2.05

Secondhand smoke is composed of sidestream smoke (the smoke released from the burning end of a cigarette) and exhaled mainstream smoke (the smoke exhaled by the smoker). Because sidestream smoke is generated at lower temperatures and under different conditions than mainstream smoke, it contains higher concentrations of many of the toxins found in inhaled cigarette smoke. Secondhand smoke contains at least 250 toxic chemicals.

Partial listing of toxic chemicals in secondhand smoke:

- 2-naphthylamine
- 4-amniobiphenyl
- Aldehydes (such as formaldehyde)
- Ammonia Nickel compounds
- Aromatic amines (such as 4-aminobiphenyl)
- Arsenic
- Benzene
- Beryllium
- Butane
- Cadmium
- Carbon Monoxide
- Chromium
- Ethylene oxide
- Hydrogen cyanide
- Lead
- N-Nitrosamines
- Polynuclear aromatic hydrocarbons (such as Benzo[a]pyrene)
- Radioactive polonium-210
- Toluene
- Vinyl chloride

The Burden of Tobacco Use

Tobacco use is the single most preventable cause of disease, disability, and death in the United States. Each year, an estimated 443,000 people die prematurely from smoking or exposure to secondhand smoke, and another 8.6 million have a serious illness caused by smoking. Despite these risks, approximately 46 million U.S. adults smoke cigarettes. Smokeless tobacco, cigars, and pipes also have deadly consequences, including lung, larynx, esophageal, and oral cancers. The harmful effects of smoking do not end with the smoker. More than 126 million nonsmoking Americans, including children and adults, are regularly exposed to secondhand smoke. Even brief exposure can be dangerous because nonsmokers inhale many of the same carcinogens and toxins in cigarette smoke as smokers. Secondhand smoke exposure causes serious disease and death, including heart disease and lung cancer in nonsmoking adults and sudden infant death syndrome, acute respiratory infections, ear problems, and more frequent and severe asthma attacks in children. Each year, primarily because of exposure to secondhand smoke, an estimated 3,000 nonsmoking Americans die of lung cancer, more than 46,000 die of heart disease, and about 150,000–300,000 children younger than 18 months have lower respiratory tract infections.

Source: Tobacco Use, Targeting the Nation's Leading Killer: At A Glance 2010 Centers for Disease Control and Prevention, National Center for Chronic Disease Prevention and Health Promotion

Tobacco Use and Secondhand Smoke Increase Your Risk For....

Cancer

- The risk of developing lung cancer is about 23 times higher among men who smoke cigarettes and about 13 times higher among women who smoke cigarettes compared with people who have never smoked.
- Cigarette smoking increases the risk for many types of cancer, including cancers of the lip, oral cavity, pharynx, esophagus, pancreas, larynx (voice box), lung, uterine cervix, urinary bladder, and kidney.

Heart Disease

- Smoking causes coronary heart disease, the leading cause of death in the United States.
- Cigarette smokers are 2–4 times more likely to develop coronary heart disease than nonsmokers.
- Cigarette smoking approximately doubles a person's risk for stroke.
- Cigarette smoking causes reduced circulation by narrowing the blood vessels (arteries). Smokers are more than 10 times as likely as nonsmokers to develop peripheral vascular disease.
- Smoking can cause abdominal aortic aneurysms.
- Secondhand smoke exposure causes heart disease and lung cancer in nonsmoking adults.

- Nonsmokers who are exposed to secondhand smoke at home or work increase their heart disease risk by 25–30 percent and their lung cancer risk by 20–30 percent.
- Breathing secondhand smoke has immediate harmful effects on the cardiovascular system that can increase the risk of heart attack. People who already have heart disease are at especially high risk.

Respiratory Disease

- Cigarette smoking is associated with a tenfold increase in the risk of dying from chronic obstructive lung disease.
- About 90 percent of all deaths from chronic obstructive lung diseases are attributable to cigarette smoking.

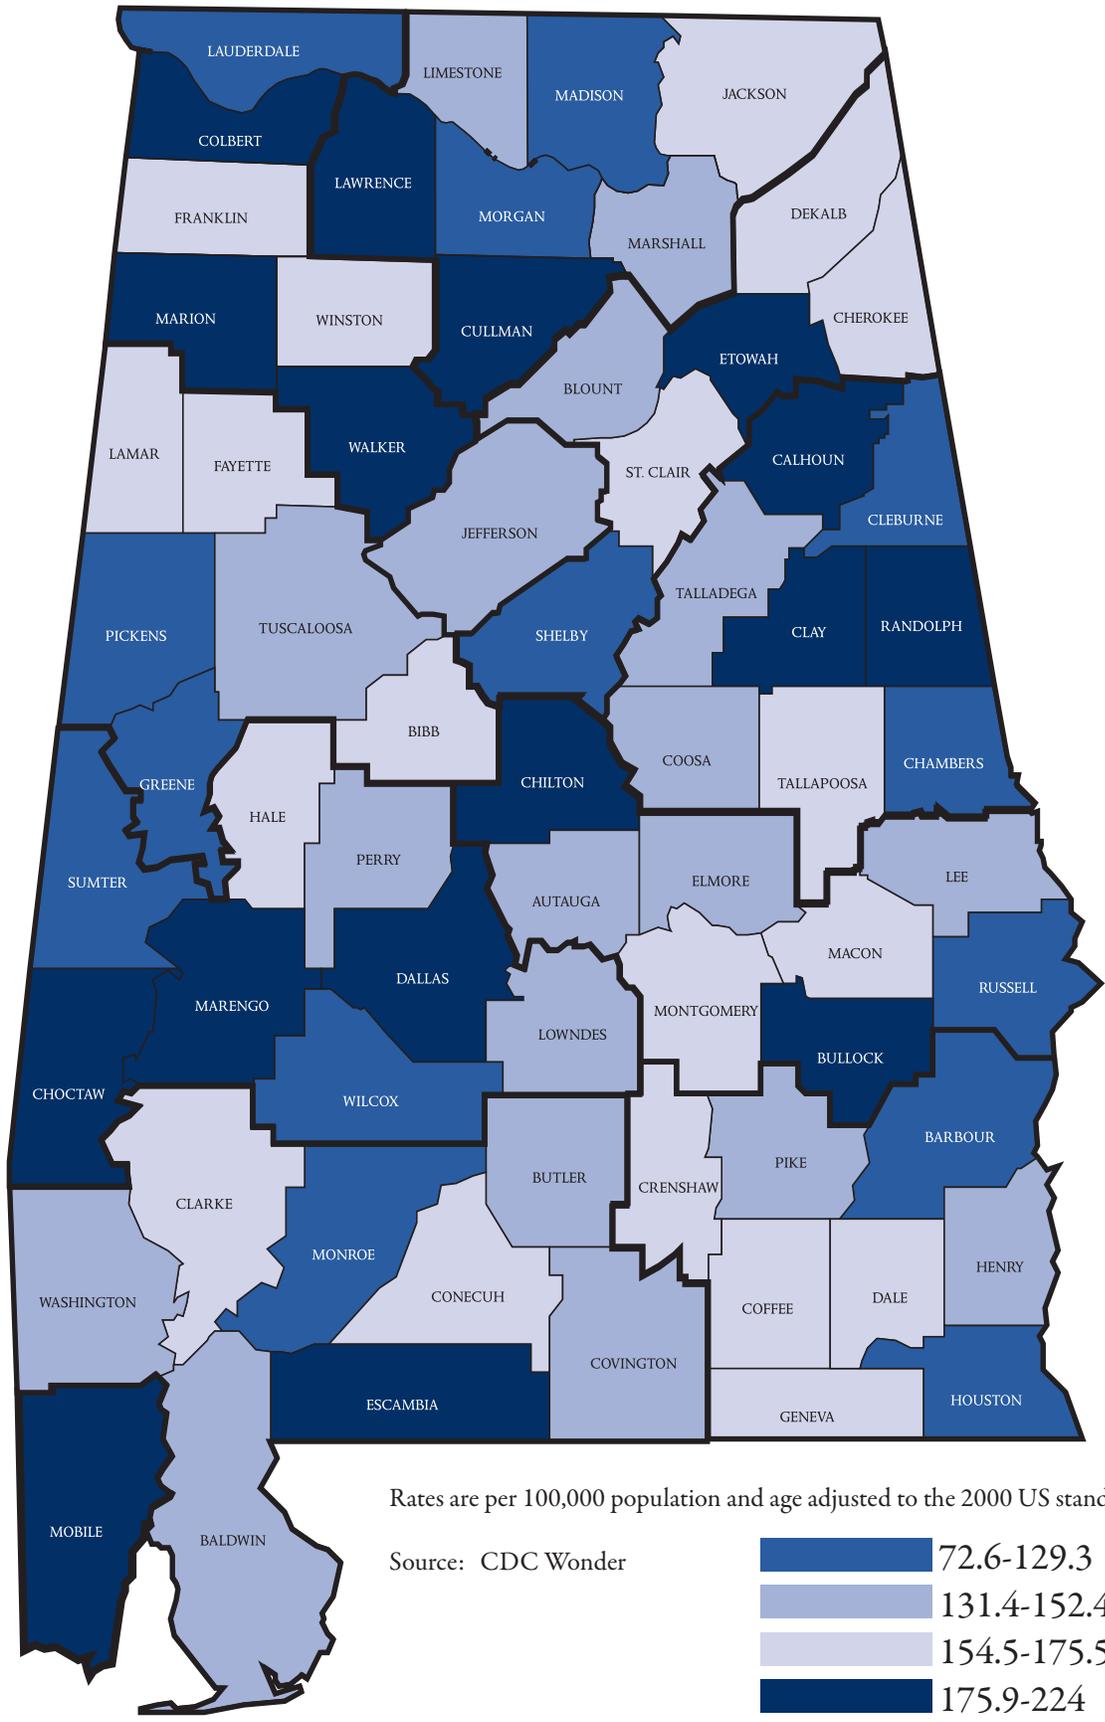

Smoking During Pregnancy Causes Complications

Research has shown that smoking during pregnancy causes health problems for both mothers and babies, such as:

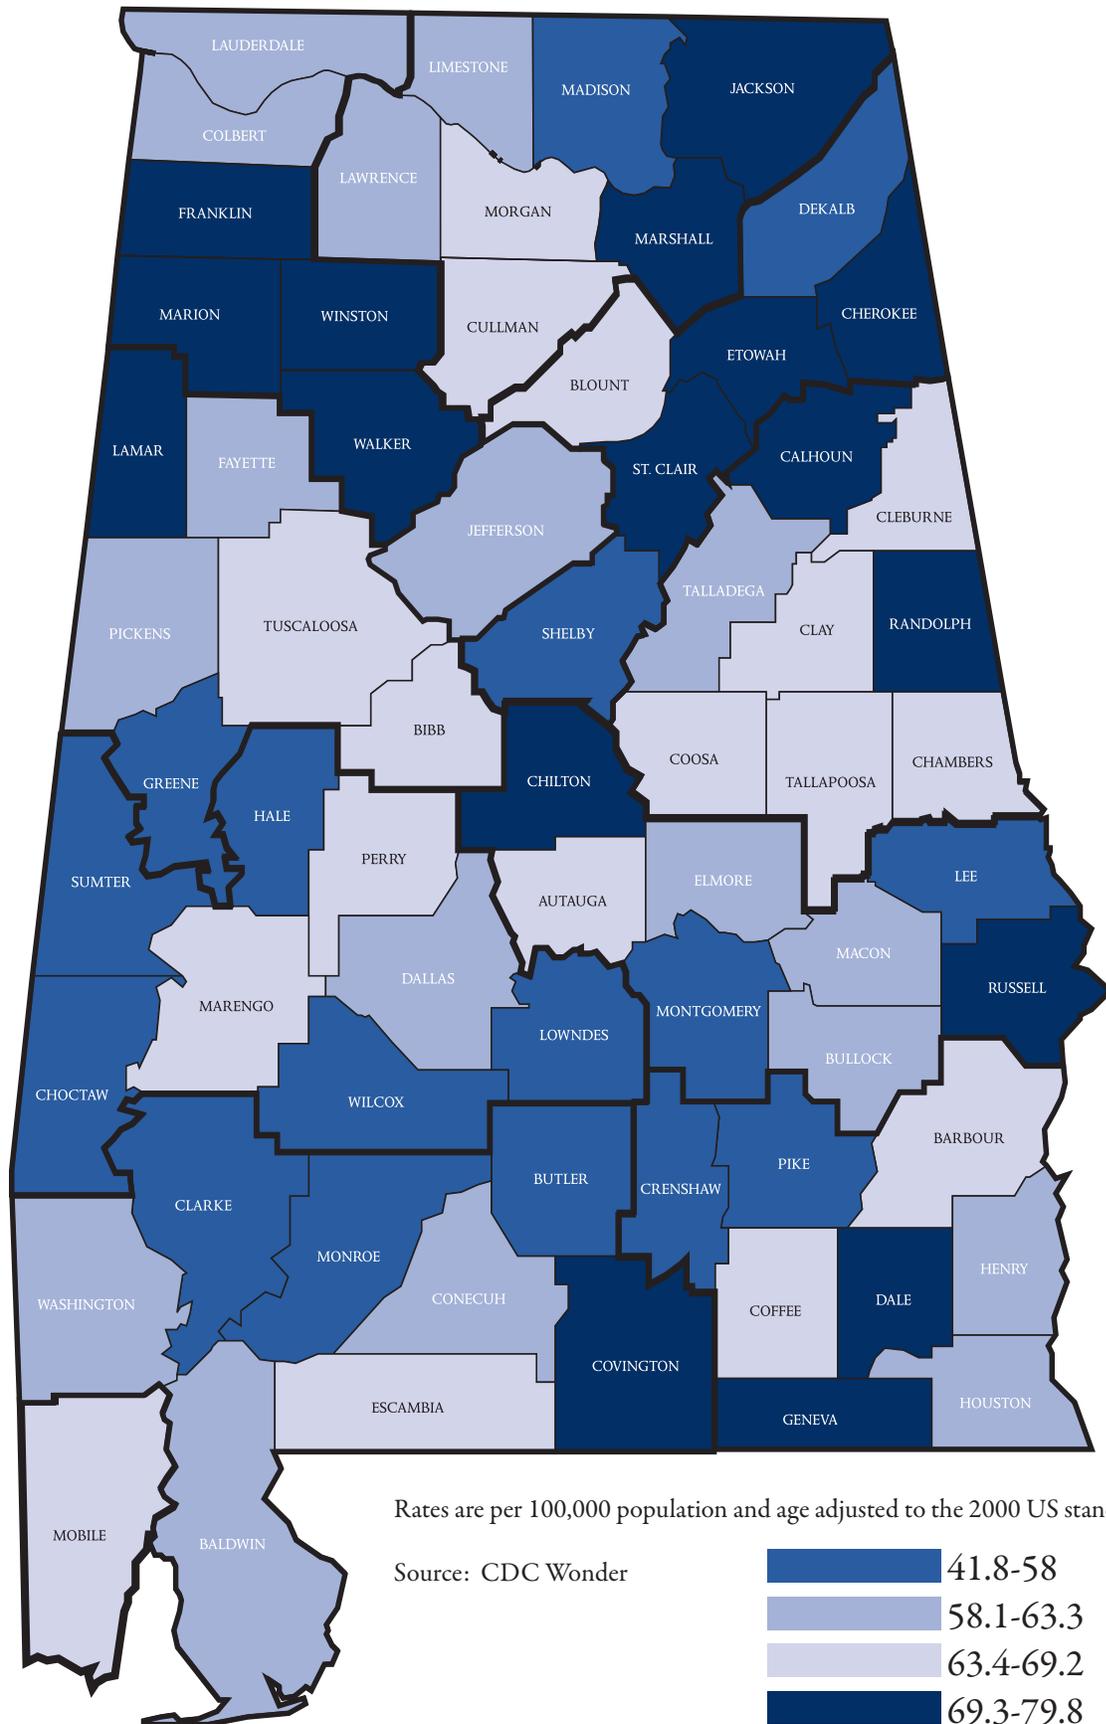

- Pregnancy complications
- Premature birth
- Low-birth-weight infants
- Stillbirth
- Sudden infant death syndrome (SIDS.)

Comprehensive Tobacco State Plan Logic Model

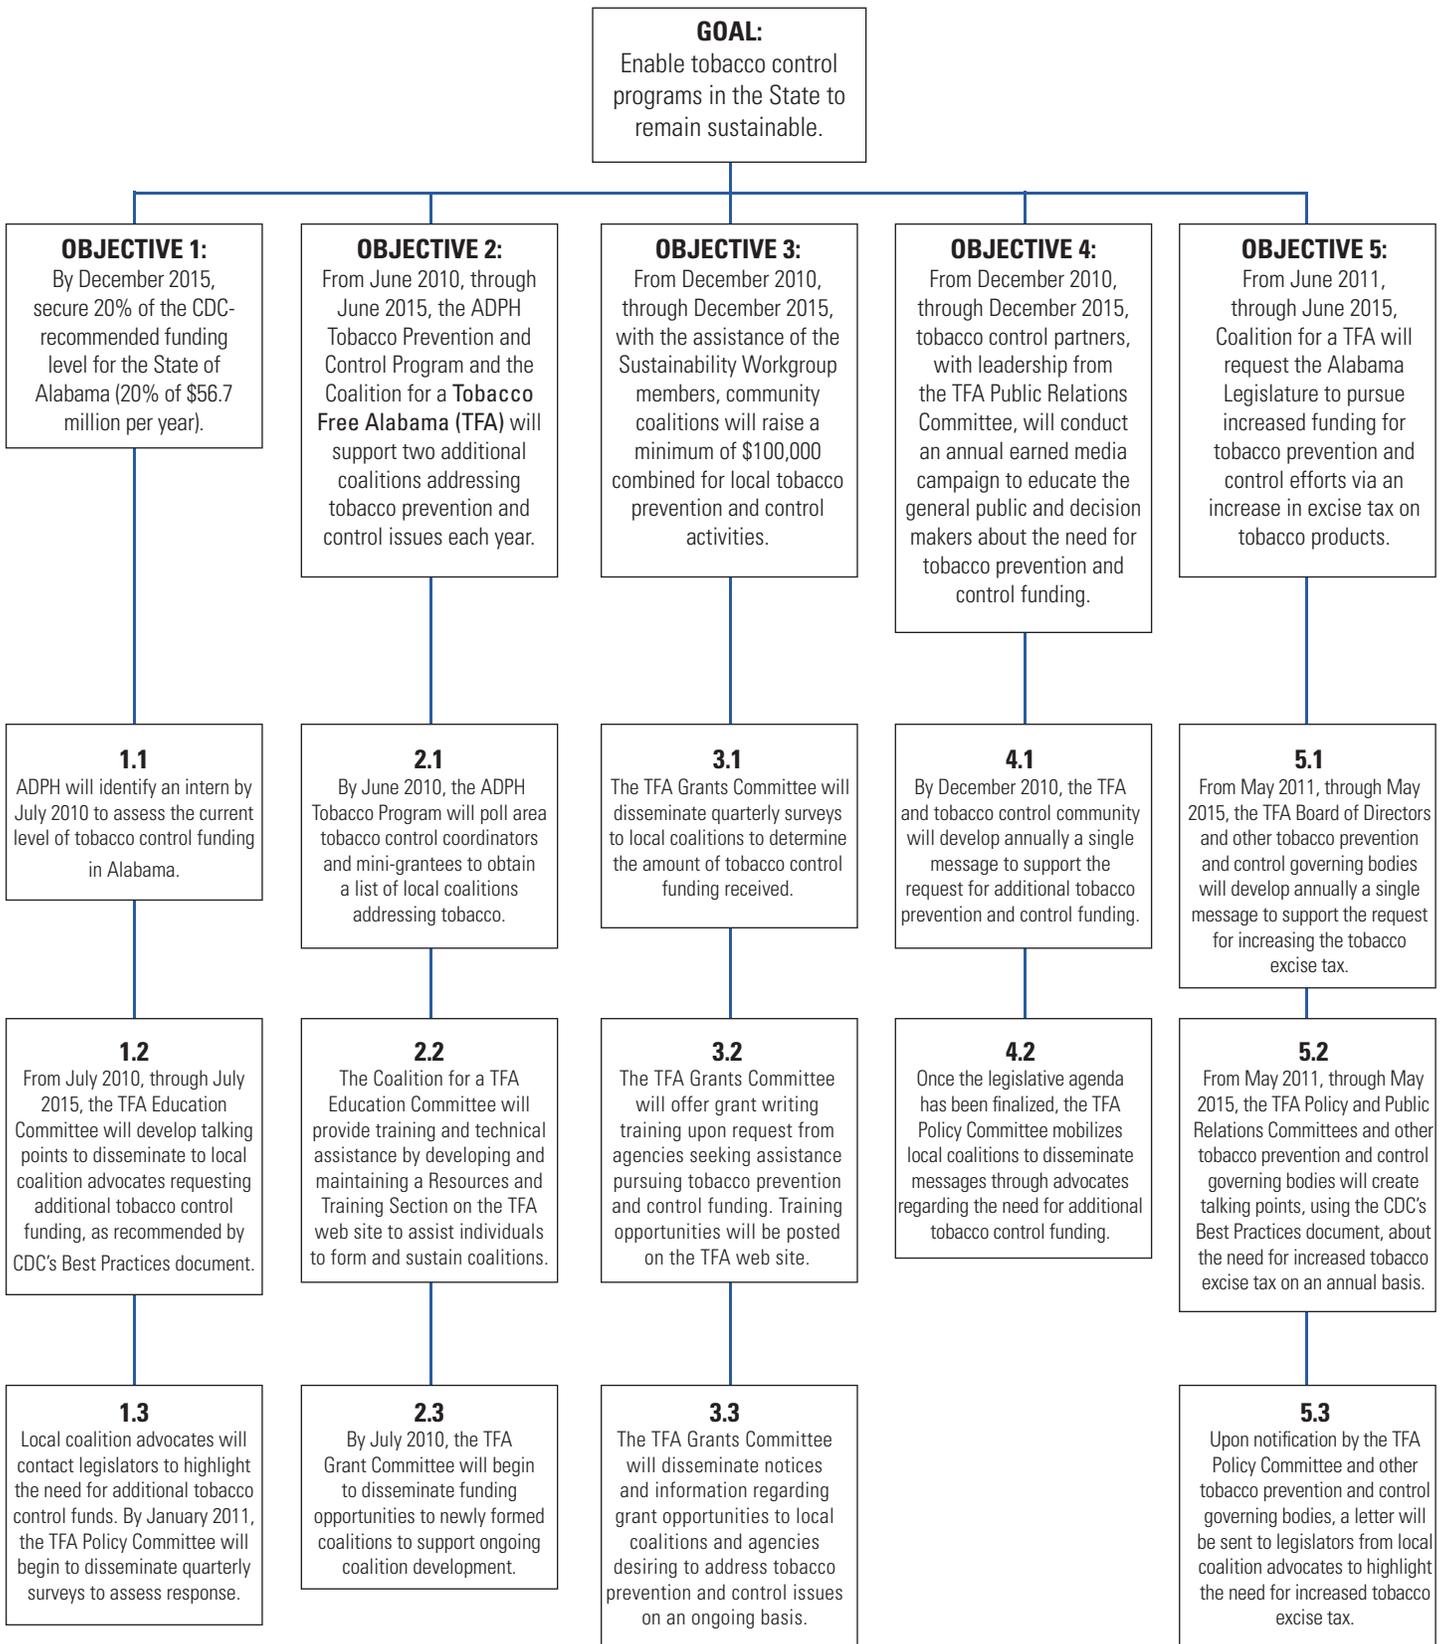

Communications Plan

One of the ways in which states can reduce the number of tobacco users is by implementing a comprehensive statewide media plan. In educating the public about the dangers of tobacco use and secondhand smoke, such a plan can serve as a blueprint to help users quit and keep youth from ever starting tobacco use. Sustained media campaigns, combined with other interventions and strategies, can be effective. Media communications play a key role in shaping tobacco-related knowledge, opinions, attitudes and behaviors. Several states have shown their strong counter-marketing programs have been an important piece in a comprehensive tobacco control program. Based upon this science-based evidence, the Communications Committee of the Alabama Tobacco Use Prevention

and Control State Task Force crafted a plan to promote tobacco cessation resources in the state and educate the public on the harmful effects of tobacco. The committee, which included representatives from organizations and businesses around the state, realized that such a plan could influence public support for tobacco control interventions and increase support for school and community efforts. The committee suggested the message works best when it is connected to activities of local programs throughout the state. The state will begin implementing these recommendations during the next five years. Alabama should see prevalence rates decrease and support for smoke-free laws increase, based upon strategies and recommendations detailed in the communications plan.

Goals and Objectives

	GOAL	OBJECTIVE	BASELINE	2015 TARGET OUTCOME	HEALTHY PEOPLE 2020 OBJECTIVE
CESSATION	To reduce tobacco use, tobacco control efforts will increase smokers' readiness and desire to quit by providing cessation information and resources, and an environment supportive of quitting tobacco use.	By 2015, reduce cigarette smoking by adults from 22.1% in 2008 to 18% percent among all adult population groups.	22.1% of adults smoke cigarettes. <i>Source: 2008 Alabama BRFSS</i>	18% of adults who smoke cigarettes.	Reduce tobacco use by adults.
		By 2015, reduce annual per capita consumption of cigarettes from 72.8 packs per capita per fiscal year to 51.8 packs per capita per fiscal year.	72.8 annual per capita consumption of cigarette packs <i>Source: AL Dept of Revenue 2008-09 fiscal year data.</i>	51.8 annual per capita consumption on cigarettes	Reduce tobacco use by adults.
PREVENTION	To reduce tobacco use, tobacco prevention efforts must increase school-based interventions in combination with mass media campaigns and the use of policy change to create support for education and intervention efforts.	By 2015, reduce cigarette use by students in grades 9-12 from 18.6% in 2010 to 15%.	18.6% of students in grades 9-12 use cigarettes <i>Source: 2010 Youth Tobacco Survey.</i>	15% of students in grades 9-12 who use cigarettes.	Reduce tobacco use by adolescents.
		By 2015, decrease the proportion of 6th-8th graders who report ever having tried cigarettes from 25.8% in 2010 to 20%.	25.8% of 6th-8th graders who report ever having tried cigarettes <i>Source: 2010 Youth Tobacco Survey.</i>	20% of 6th-8th graders who report having tried cigarettes.	Reduce the initiation of tobacco use among children, adolescents, and young adults.
PROTECTION FROM SECONDHAND SMOKE	To ensure 100% smoke-free, healthy environments for every Alabamian who deserves a smoke-free workplace, school, and home.	By 2015, increase or improve from 124 in 2009 to 144, the number of city policies and strengthen the state law that prohibits exposure to secondhand smoke in public places and worksites.	124 city policies and 1 state law that prohibits exposure to secondhand smoke in public places and worksites. <i>Source: Policy Tracking System</i>	144 city policies and a stronger state law that prohibits exposure to secondhand smoke in public places and workplaces.	Establish laws in states, District of Columbia, territories, and tribes on smoke-free indoor air that prohibit smoking in public places and worksites.
		By 2015, increase from 73 in 2009 to 100, the number of tobacco-free comprehensive policies in schools, including all school facilities, property, vehicles, and school events.	73 tobacco-free comprehensive policies in schools, including all school facilities, property, vehicles, and school events. <i>Source: Policy Tracking System</i>	100 tobacco-free comprehensive policies in schools, including all school facilities, property, vehicles, and school events.	Increase tobacco-free environments in schools, including all school facilities, property, vehicles, and school events.
		By 2015, increase the proportion of Alabama households that have smoke-free home policies from 82.1% in 2007 to 86%.	82.1% of Alabama households that have smoke-free home policies <i>Source: 2007 Adult Tobacco Survey</i>	86% of Alabama households that have smoke-free home policies.	Increase the proportion of smoke-free homes.

* Healthy People 2020 is created by the US Department of Health and Human Services (HHS) to draw attention to the most pressing public health issues to be addressed for the following 10 years. HHS combines scientific insights and lessons learned from the past decade, along with new knowledge from current data, trends, and innovations to create the report. Healthy People 2020 will reflect assessments of major risks to health and wellness, changing public health priorities, and emerging issues related to the nation's health preparedness and prevention.
